

#### Data Sheet

# VIAVI OSCA-710

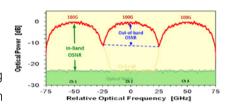

First In-Service Pol-Mux Optical Spectrum & Correlation Analyzer.

# Characterize and diagnose 40/100/200G, and 400G traffic without shutting down the network or individual channels.

Measuring Optical Signal-to-Noise-Ratio (OSNR) in live Dense Wavelength Division Multiplexing (DWDM) systems using polarization multiplexed transmission (Pol-Mux) is an unsolved challenge. The VIAVI Pol-Mux OSCA-710 is the first instrument to use a novel spectral correlation technique (SCorM, VIAVI patent) to enable the measurement of in-band OSNR, and per channel chromatic dispersion of 40 Gb/s, 100 Gb/s, 200 Gb/s and 400 Gb/s coherent transmission signals utilizing Pol-Mux in a live system, without shutting down the network or individual channels.

The method is independent of modulation format and data rate and

is tolerant of large amounts of chromatic dispersion (CD) and polarization mode dispersion (PMD) as well as spectral filtering in ROADMs. The use of ultra-high resolution coherent receivers

provides complete signal characterization in amplitude, frequency, phase, and polarization to be independent of modulation formats.

The VIAVI SCorM method enables the first ever measurements of inband OSNR in live, coherent systems with Pol-Mux. The OSCA-710 will significantly simplify optical testing during installation, commissioning and maintenance, and minimize overall system downtime and man-hours.

## Configuration: OSCA-710 Kit (Incl. TB/MTS-8000 MF)

**OSCA-710:** Optical spectrum & correlation analyzer module

**UTM-710:** Utility Module (optional) includes optical pre-amplifier for low ch-power applications and optical pre-filter for high channel count applications.

#### **Benefits**

- Industry's first OSCA that measures in-band OSNR on Pol-Mux signals
- First instrument that measures per channel CD
- Characterize traffic without shutting down the network or individual channels

#### **Key features**

- Supports PM-BPSK, PM-QPSK, and PM-xQAM modulation formats
- Tolerant of ROADM filtering and of high CD and PMD
- Ultra-high resolution, coherent OSCA for testing Nyquist- and Super-Channels
- WDM-Expert software for autoidentification of symbol-rate in mixed traffic pipes

#### Applications

- Core and metro DWDM networks with or without ROADMs
- Undersea communication links
- Qualification of any fiber optic link utilizing coherent detection

### **Specifications (preliminary)**

(2) Measured in 0.1nm bandwidth

(3) Valid for OSNR measurements according IEC 61280-2-9. For in-band OSNR measurements at 100Gps DP-QPSK signals and >-20dBm/ch: OSNR range = 10 to 25 dB, OSNR accuracy = ±1 dB

(4) For 100Gbit/s modulated signals
